

H Series Isolator

→ Introductions

This isolator converts the current/voltage signals into current/voltage signals, and also provides transmitters with power in the field. Current input isolator allows transmission of HART communication signals.

The input, output, and power supply are galvanically isolated from each other. The main advantages of the isolator are fast response, low dissipation and temperature stability. It can be interfaced with all kinds of device, such as DCS, PLC and other systems.
